

03/06/2026

Throughout this project, I will be utilizing the total sales and average price metrics, which are calculations that will help me with my analysis. Transforming the results into a sum or an average makes it so calculations can encompass a wide range of data.

Domino's Pizza Leads in Total Sales via High Location Density

Insights:

Domino's Pizza has the highest sales amount out of all of its competitors. The restaurant stays in its respective place, being first in the Total Sales by Name and Number of Locations by Name visuals. There is a noticeable correlation between the two visuals; the more locations a restaurant has, the higher their total sales amount will be.

Recommendation:

More Locations; This accumulation of ratings also includes presenting restaurants that have multiple locations. Outsourcing their competitors, a restaurant can raise their total sales amount with multiple operational locations.

Domino's Pizza Leads in Total Sales via High Rating Count

Domino's Pizza Leads in Total Sales via High Rating Count

name

- ☐ Domino's Pizza
- ☐ NBK Food Home
- ☐ Pizza Hut
- ☐ Red Chilly Chinese Food
- ☐ REDDY VISHNU FAST FOODS

Use the slicer above to see the correlation between a restaurant's Rating Count and their Total Sales amount.

Total Sales & Rating Count by Name

name	Count of rating	Sum of sales_amount
Domino's Pizza	442	₹5,025,266
Pizza Hut	322	₹1,792,693
KFC	309	₹1,605,569
Kwality Walls Frozen Dessert and Ice Cream Shop	300	₹1,370,091
Baskin Robbins	274	₹1,627,731
Subway	232	₹1,479,139
Faasos - Wraps & Rolls	197	₹1,327,852
The Biryani Life	106	₹1,081,514
Total	148541	₹986,565,016

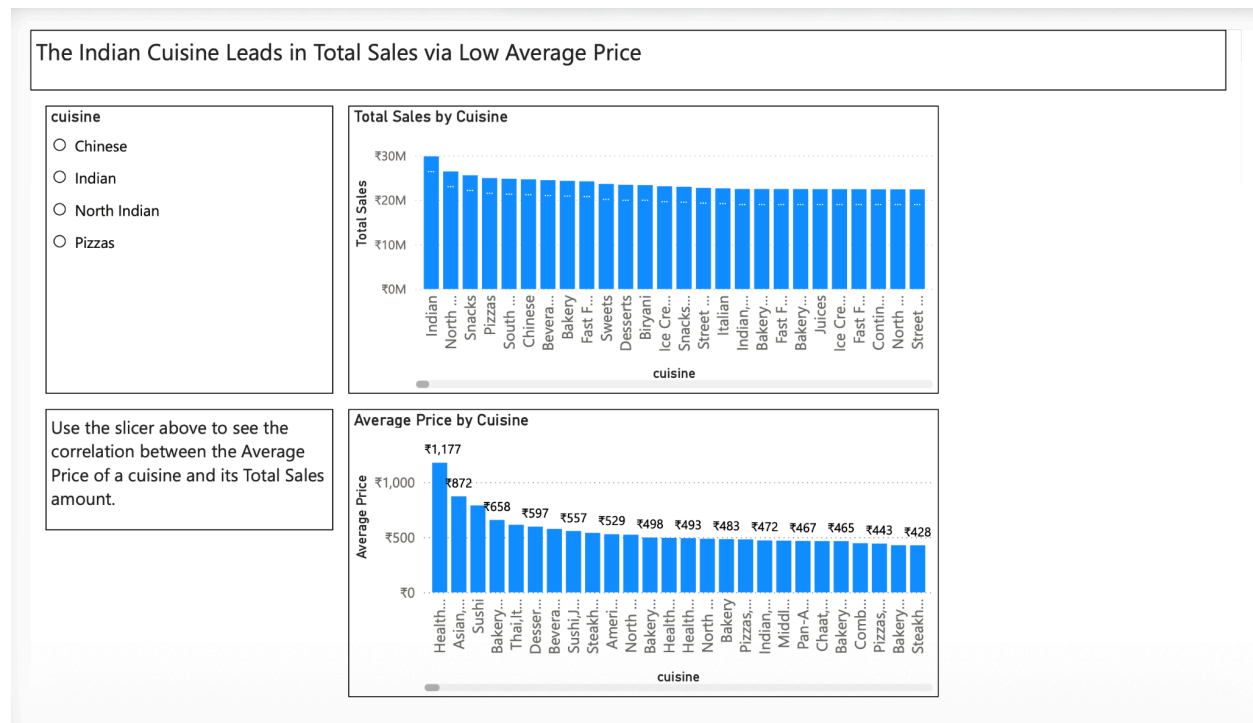

Insights:

Domino's leads in the Rating Count column, as well as in the Total Sales column, as shown in the Total Sales & Rating Count by Name table. The correlation between the two columns is based around the fact that a higher rating count results in a higher total sales amount.

Recommendation:

Raising popularity; Presenting restaurants with a high rating count can increase the restaurant's popularity, leading to a push in sales.

The Indian Cuisine Leads in Total Sales via Low Average Price

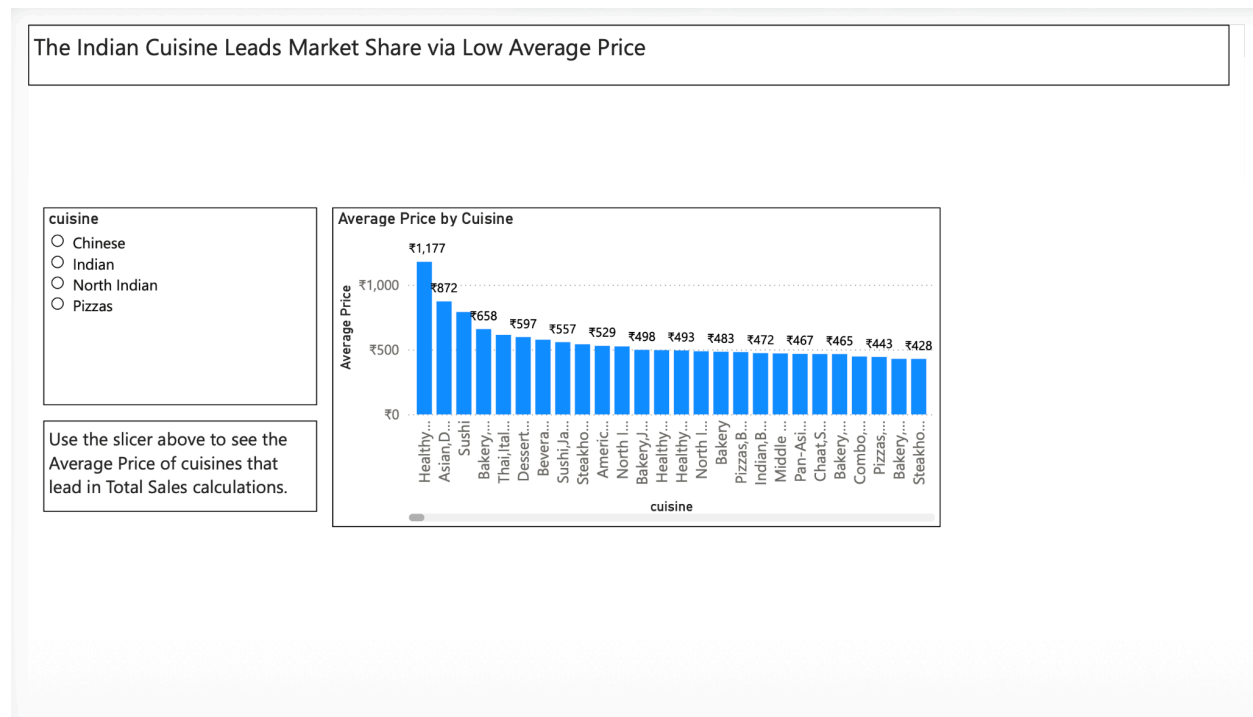

Insights:

Indian, North Indian, and Chinese cuisine are the top three cuisines due to there being lower prices. The 'Pizzas' category has the highest average price with the second lowest total sales amount. The higher the average price of a cuisine, the lower the total sales amount.

Recommendation:

Cuisine popularity; In addition to multiple locations, a restaurant's average price point is vital to their total sales amount. Presenting restaurants with an average price point below the data median could result in a raise in sales. This looks like also presenting restaurants that sell the most popular cuisines.

The Indian Cuisine Leads Market Share via Low Average Price

Insights:

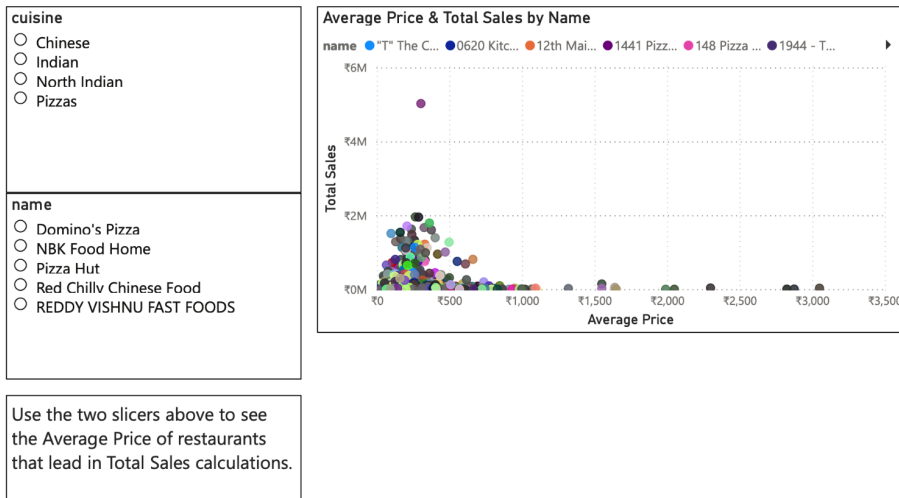

Domino's average price is just above the average price in the 'Pizzas' cuisine category. This average price point seems to be the most convenient for customers, as Domino's leads in Total Sales.

Recommendation:

Reasonable prices; A good average price point near the data median could keep customers coming back. Finding restaurants with an average price that is sought after by customers is the key to a higher total sales amount.

Domino's Pizza Lead in Total Sales via Low Average Price

Domino's Pizza Lead in Total Sales via Low Average Price

Insights:

Domino's average price is significantly lower than the restaurants with the highest average prices. Their average price point is the most lucrative, as it has resulted in a leading total sales amount. Restaurants that have an average price far above the data median have shown to accumulate a low total sales amount.

Recommendation:

Favorable price point; As well as serving a popular cuisine, finding restaurants with an average price that is sought after by customers is the key to a higher total sales amount. Presenting these restaurants as they are or with a better average price will result in a push in sales.

Conclusions

1. Domino's Pizza has the highest total sales amount due to their high rating count and having the most locations.
2. Indian, North Indian, and Chinese cuisine are the top three cuisines due to there being lower prices.
3. Domino's average price is just above the average price in the 'Pizzas' cuisine category. This average price point seems to be the most convenient for customers, as Domino's leads in Total Sales.

Recommendations

1. More Locations: Outsourcing their competitors, a restaurant can raise their total sales amount with multiple operational locations.
2. Raising popularity; Presenting restaurants with a high rating count can increase the restaurant's popularity, leading to a push in the sales.
3. Favorable price point: Presenting restaurants with an average price point below the data median could result in a raise in sales. This looks like also presenting restaurants that sell the most popular cuisines.
